

## NOTICE TO TRAINERS

# FURNEYS STOCKFEEDS

Trainers are warned in respect to the use of some commercially available feeds manufactured by Furneys Stockfeeds that have been found to contain levels of cobalt above that specified on the labels. In particular, the analysis of feed samples taken from the following products was found to contain levels of cobalt excessively above the disclosed analysis on the product label. Trainers are advised that they should not feed to their horses the following products.

Date	Product Name	Label Number

## **General Advice to Trainers Regarding Feed and Supplements**

Separate to the advice above, Racing NSW Stewards are aware that some trainers are having manufacturers prepare custom-made horse feeds, feed additives, and/or supplements. It is understood that some manufacturers are not listing:

- a. all constituents; and/or
- b. the concentration of all constituents,

on the labels of their custom-made products. Amongst other things, this makes it difficult for trainers to fully understand what the constituents of their horses' feeds and supplements are, and what the concentrations of those constituents are.

Trainers are reminded of their obligation to know what they are feeding, and/or administering to, their horses, including the concentrations of constituents of any products used by them. In the event that trainers are not aware of the constituents of their horses' feeds, feed additives and/or supplements (and the concentrations of such constituents), they should:

- a. exercise caution in feeding such products to their horses; and
- b. take immediate steps to ascertain the constituents of their horses' feeds, feed additives and/or supplements (and the concentrations of such constituents).
